

COMPRESSION SOLUTIONS WORKSHOP

Presented by Dr. Gabrielle McMullin

Friday, September 29th, 9:00 am - 12:00 pm

Join us for an engaging and hands-on session where you'll learn the practical aspects of compression therapy. Led by Dr. Gabrielle McMullin, this workshop aims to enhance your skills in applying compression techniques.

Presenter

Dr. Gabrielle McMullin is a highly respected expert in the field of compression therapy. With extensive experience in the field, Dr. McMullin will guide you through the workshop, providing valuable insights and practical tips for effective compression therapy.

Why?

It is well recognised that Compression Therapy is essential for healing venous leg ulcers and for controlling leg swelling but that it is under-utilised. This was emphasised at the European Wound Management Conference in Milan this year. The failure to use compression therapy effectively is the major reason for persistence of chronic wounds with the associated high cost of treatment.

Who Should Attend?

This workshop is suitable for healthcare professionals, including nurses, physiotherapists, wound care specialists, and other practitioners involved in the management of chronic wounds and lymphedema. Whether you are a beginner or seeking to refine your skills, this workshop offers something for everyone.

WORKSHOP DETAILS:

Workshop Objectives

1. Apply bandages with the aid of a sub bandage pressure monitor.
2. Explore different methods of compression and their benefits: bandages, stockings, velcro garments, and compression pumps.

Date: Friday, September 29th
